

SPRING 22: BIO 335 ECOLOGY

Professor: Randy Long

MWF 11:30 - 12:30, F 1:50 – 4:50

Is Ecology for you?

- Do you ever wonder why certain species are in different locations?
- Curious why some species live in groups and other are solitary?
- Are you interested in understanding how different species interact?
- Do you like to play outside and collaborate in teams?
- Do you want to gain a better understanding of the world around you?
- The answer is yes! Ecology is for everyone!

Classes will be a mixture of group activities, discussions, and conventional lectures. Each week we will have a lab and will get outside if the PNW weather allows, and there will be at least one overnight trip.

Ecology is the study of interactions that affect the distribution and abundance of organisms

Psst! You can find out more about me, my research, and teaching here
